"The Nursery For Particular People"

Wild Flower Gardening...

Your garden design should be a natural process, growing out of the inherent character of the site. We should strive to develop that which Nature has given us rather than to destroy Nature and attempt to create something wholly artificial. Our areas are irregular in outline, their limits are hidden and masked rather than stressed, giving charm and grace seldom possible in a formal garden.

When we begin to carry out our design with plant material, we use material graceful in its unfettered natural growth. We employ masses of a few varieties rather than specimens, for in the grouping of plants we create a series of pictures, each interesting, yet having a definite relationship to the whole scheme.

The wandering pathway, that group of small trees, or an unexpected pool create pleasing pictures that have a distinct personality of their own.

We suggest that you select your plants from this catalog for your naturalistic garden.
